

The evolution of the Corrigo chair

The chair for an ideal world

In an ideal world, an office chair would be bespoke to fit everyone, having been designed in perfect harmony with their back. Designed by an Ergonomist and Physiotherapist, the Corrigo is designed to be healthy for the individual. The name 'Corrigo' is Latin for 'to correct'.

The Corrigo embraces, rather than denies individuality. It is our philosophy to provide absolute support for the whole of the seated body. The Corrigo's unique shape evolved in order to provide a true fit between the individual and the chair. The narrow backrest provides essential support without impeding freedom of movement and actively promotes a healthy posture. It is designed to 'treat' the spine rather than stress it.

Spinal support

The unique design of the Corrigo chair supports you in an upright position. Its narrow back encourages you to pull your shoulders back, opening up your chest when sitting. It is contoured to support your spine in a vertical position, whilst maintaining the natural curves of your back, giving crucial support to the pelvis and lower back.

How does it work?

The Corrigo supports the spine and pelvis and holds the body in the ideal position for working at a computer. No more slumping, slouching or hunching over the desk!

Why do you need it?

The answer is simple – back pain. A huge proportion of spinal problems can be improved, prevented, or even cured simply by changing your posture. The Corrigo is designed to do just this.

By freeing users from back pain, productivity is increased and absences decreased. By encouraging an upright posture, it allows the chest to open up and increases oxygen to the brain.

What makes it different?

The Corrigo recognises that we are all individuals. It is the combination of its design features that makes it different.

The backrest is designed around the shape of the spine, with contours emulating the natural curves of an ideal spinal position.

The lower backrest supports both the sacrum and lumbar area.

A narrow upper backrest supports between the shoulder blades, encouraging a shoulders down and open chest posture, helping to prevent slouching.

Armrests are shaped around the body and sit directly under the shoulders, to release any tension, whilst still allowing full access to the desk.

Different sized chairs, both incorporating a large amount of adjustability, ensure a true fit. Even the armrests and seat pan are adjustable.

The chair that embraces individuality

The Corrigo chair was designed by an Ergonomist and Physiotherapist to emulate the natural curves of the body, cradling the spine, whilst remaining fully adjustable to 'fit' your body.

Seat and backrest heights and angles can be adjusted independently of one another, allowing almost unlimited flexibility around your body and posture.

The Corrigo's backrest is designed to allow for your body's unique lumbar height and depth. Featuring inflatable lumbar and pelvic support, the chair's backrest can be inflated for the ultimate in support and comfort, whilst its angle is easily tuned to your individual requirements.

The Corrigo will support the body in a variety of working tasks. With its highly adjustable armrest height and width the chair can be positioned much closer to a desk, reducing the need to lean forward and away from the support of the backrest.

Custom made for you

In addition to the Corrigo's amazing flexibility, it is also available in a wide variety of fabrics and colours to suit your environment.

The Junior Corrigo

For our full range of options please see the website: www.corrigochairs.com

Five Year Guarantee*

Thanks to Corrigo's scientific design and carefully structured contours, you can have great posture, feel relaxed and enjoy increased productivity. A healthy back equals a healthy mind.
